

ABSTRACT

The invention relates to a method for exchanging data using a wireless connection, according to which a user with one or more portable terminals is located in the transmission and receiving area of at least one network and the terminal or terminals log on automatically to the network in order to establish a connection. A transmission channel for the data exchange is made available for the respective connection that has been established and said transmission channel is automatically adapted for the data exchange to the type of terminal and the type, in particular quantity, of data to be transmitted, by an administrator that is allocated to the network.
